**Fastener Inspection Equipment**  
**Innovative Gage Design**  
**Dimensional Calibration**

## RecessCheker™

This patented gaging system, provides fast interchangeability of all recess measuring elements listed below on a single base having one digital indicator. This system is ideal for use in manufacturing applications where the recess measurements need to be recorded electronically and for incoming or final inspection applications where space, storage and total gage costs are important. When four or more of the above elements are required, it is less expensive to purchase the Recess Cheker™ System instead of individual gages. Custom made recess elements are also available upon request.

**Slot  
Recess**

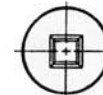

**Pozidriv  
Recess**

**Hex  
Recess**

**Phillips  
Recess**

**Square  
Recess**

**Hexalobular  
Recess**

**NOTE: Fastener recesses should be inspected to assure the user that the fasteners can be driven properly and effectively during assembly.**
